Professional Summary

Results-driven 3rd-year B.Tech Computer Science student with hands-on experience in full-stack and AI-based development. Proficient in building responsive, scalable web applications using the MERN stack, Next.js, and C++. Skilled in software engineering, REST API integration, authentication, and Agile workflows with successful production deployments and hackathon wins.

Technical Skills

Languages: C++, JavaScript, Python, C, SQL, Java
Frontend: React.js, HTML, CSS, Bootstrap, Tailwind CSS, Next.js
Backend: Node.js, Express.js, MongoDB, Mongoose, MySQL, REST APIs
AI/ML: Supervised Learning, PyTorch (beginner), Model Training & Evaluation, Pandas, NumPy, Matplotlib
Developer Tools: Git, GitHub, VS Code, Postman, Figma, Agile Methodology
Core Competencies: Full-Stack Development, API Integration, Authentication, Performance Optimization, UI/UX, Data Structures, Team Collaboration

Professional Experience

Front-End Developer Intern — CultureVo (NoviFE Platform, Next.js) May 2025 – October 2025

- Engineered and deployed complete production-ready frontend for **NoviFE**, an AI platform with 50+ global AI personalities using scalable component architecture.
- Architected a responsive PWA using Next.js 15, React 19, Tailwind CSS, and Framer Motion — achieving 95% cross-browser compatibility and sub-1s load through build optimization.
- Engineered **VoiceCallUltra**, a real-time calling system (50–85% faster response) using WebSocket streaming with async event handling and multi-format audio fallback.
- Integrated FastAPI and Supabase for secure authentication and AI memory sync; reduced data fetch latency by 40% with optimized API lifecycle and caching. Delivered pixel-perfect UI across devices.
- Implemented reusable UI components for diary, chat, and memory systems; improved code maintainability and reduced duplication by 35% using DRY principles and modular design.

Member — NextTech Lab, SRM University AP Feb 2025 – Aug 2025

- Designed and executed AI-driven prototypes integrating real-time APIs, supporting 50+ concurrent data streams using scalable backend communication.
- Mentored 3+ junior developers and improved sprint velocity through Agile workflows, Git branching, and CI/CD-based version control practices.
- Conducted peer code reviews and introduced reusable UI + API design systems, increasing project consistency and maintainability by 25%.

Achievements

- MSC Zerozam (2025):** Secured 1st place for creating a full-stack healthcare application with secure data workflows.
- Secure X Hackathon (2024):** Engineered a winning Chrome extension with site-blocking and credential-protected rate-limiting features used by 10+ testers.
- Geo Genius Olympiad (2018):** Silver medalist with 95% accuracy among 10,000+ participants nationwide.

Projects & Contributions

Asses.ai (AI Mock Interview Platform) Repository

- Built an AI-powered technical interview simulator integrating Gemini, FastAPI, Redis, React for real-time adaptive questioning.
- Engineered automated resume parsing with GitHub/LeetCode profile scraping to generate CS and DSA interview flows.
- Implemented speech-to-text, text-to-speech, and audio recording pipeline enabling natural voice-driven mock interviews enriched with RAG-powered contextual memory.

Svalinn (Chrome Extension) Repository

- Created a focus-enhancing Chrome extension for distraction blocking using password-protected rate-limiting.
- Integrated local storage with secure credential handling for 100+ active testers, ensuring persistent access control.
- Received 4.8/5 rating with 10+ early downloads, proving reliability and user adoption.

Calmify (Full Stack App) Repository

- Engineered a full-stack mental wellness platform using React, Node.js, MongoDB, Azure OpenAI, and Socket.IO.
- Implemented JWT authentication, encrypted role-based access, and chat handling 500+ messages/day at 99% uptime.
- Enhanced responsiveness using Tailwind CSS for optimized mobile and desktop performance.

RunDown (AI Task Manager) Repository

- Programmed an AI-based task manager automating email and calendar extraction using Python Flask and Gemini API.
- Trained classification model with 90% accuracy from 1000+ emails per user for real-time prioritization.
- Implemented OAuth 2.0 authentication and daily sync automation for secure data refresh.

Education

Bachelor of Technology (B.Tech) in Computer Science and Engineering Aug 2023 – Aug 2027
SRM University AP, India
Current CGPA: 8.86 / 10
